

Project Development Phase

User Acceptance Testing – UAT Report

Team ID	SWTID-2026-2971
Team Leader	Gowsik Raja S
Team Members	Shrija M; Swetha M; Sivaram A

1. UAT Objective

Verify that the implemented ServiceNow workflow satisfies the documented employee spreadsheet import, transformation, matching, reporting, and dashboard requirements.

2. UAT Test Cases

UAT ID	Test	Expected	Observed / Documented Outcome	Status
UAT-01	Load spreadsheet into Employee Import	Import completes successfully.	Guide documents Completed and Success.	Pass
UAT-02	Transform Employee Import to Employee Test	Records are created in target table.	Guide documents successful transformation and records in Employee Test.	Pass
UAT-03	Enable Coalesce and re-import changed/new data	Existing matches update; new IDs insert.	2 inserted and 2 updated in the documented four-row test.	Pass
UAT-04	Repeat the same sheet	Duplicate rows are not inserted/updated.	4 rows ignored; 0 inserted and 0 updated.	Pass
UAT-05	Run department report	Pie chart groups by Department with Count.	Configured as documented.	Pass
UAT-06	Run location report	Bar chart groups by Location with Count.	Configured as documented.	Pass
UAT-07	Run employee list report	Required five columns are shown.	Configured as documented.	Pass
UAT-08	Add reports to dashboard	All three reports appear on Employee Analytics Dashboards.	Configured as documented.	Pass

3. UAT Sign-off

Formal tester names, dates, signatures, and defect records are not provided in the source guide; they are therefore left unspecified rather than invented.

4. UAT Scope

The UAT scope covers the user-visible workflow from spreadsheet loading through dashboard presentation. It focuses on whether the configured ServiceNow objects perform the operations described in the project guide and whether the documented outcomes are observable.

5. Detailed Acceptance Conditions

Acceptance requires successful data loading, correct source-to-target mapping, successful transformation, visible records in Employee Test, correct Coalesce behavior during a repeat import, successful creation of all three reports, and availability of those reports in Employee Analytics Dashboards.

6. UAT Evidence Interpretation

The project guide supplies explicit evidence for the import and repeat-import scenarios: a four-row test produces two inserts and two updates, while a subsequent identical submission produces four ignored rows. This provides a concrete basis for accepting the matching behavior.

7. UAT Limitations

Formal tester identity, execution date, signature, defect severity, defect IDs, and approval records are not included in the source material. The UAT document therefore records the functional outcomes without inventing sign-off information.

8. UAT Conclusion

Based on the documented workflow and outcomes, the implemented configuration satisfies the functional scenarios represented in the supplied guide.
