

Project Development Phase

UAT Execution Report

Team ID	6ab7f27c8c7c66e7067292d1
Team Leader	Gowsik Raja S
Team Members	Shrija M; Swetha M; Sivaram A

1. Execution Record

The following execution record translates the project-guide workflow into a repeatable UAT sequence. It should be used alongside the screenshots/evidence in the Project Demonstration section.

Step	Execution Action	Evidence to Check	Outcome
1	Prepare Sample Spreadsheet.xlsx	Spreadsheet contains employee fields/data.	Completed per guide.
2	Create Employee Test	Target fields exist and are visible.	Completed per guide.
3	Load Employee Import	Import Set state and success message.	Completed / Success documented.
4	Create Sample Spreadsheet Import	Source and target tables are correct.	Completed per guide.
5	Map fields and transform	Transform success and target records.	Completed / Success documented.
6	Enable Coalesce	Selected field map shows Coalesce=True.	Completed per guide.
7	Import changed/new rows	Transform history shows inserts and updates.	2 inserted + 2 updated documented.
8	Repeat same file	Transform history shows ignored rows.	4 ignored documented.
9	Create reports	Three reports execute and save.	Completed per guide.
10	Create dashboard and add reports	Dashboard contains all three reports.	Completed per guide.

2. Execution Notes

The source guide does not provide timestamps, tester signatures, defect IDs, or formal execution environment metadata. These fields are intentionally not fabricated.

3. Execution Method

Each UAT step should be executed in the same order as the source guide because later steps depend on earlier configuration. Evidence should be captured at the import, transformation, transform-history, reporting, and dashboard stages.

4. Detailed Execution Checks

Before execution, verify that Employee Test contains the required fields and that Employee Import is available. During import, verify the state and success indication. Before transformation, verify the source and target tables in Sample Spreadsheet Import and review the field mappings. After transformation, inspect Employee Test. During repeat-import validation, inspect Transform History for inserted, updated, and ignored counts.

5. Evidence Recording Guidance

For each execution step, the corresponding milestone screenshot can be used as evidence. The screenshot should be associated with the step it demonstrates rather than treated as a substitute for the written expected result.

6. Execution Conclusion

The execution sequence provides a practical checklist for demonstrating the project consistently. The guide-supported outcomes are retained exactly where they are available; additional execution metadata should be filled only when actually observed by the project team.
